ONLINE REFRESHER COURSE ON Mathematical Foundations of Contemporary Scientific Research

15-July-2026 to 28-July-2026

Programme Philosophy & Objectives

The central philosophy of this refresher course is to present mathematics as a foundational language of modern science and technology, viewed from the perspective of a broad scientific audience rather than that of specialists alone.

The primary objectives include:

01 Mathematics spoken by everyone who uses it.

Hear mathematicians, physicists, statisticians, computer scientists, engineers, and industry experts present mathematics through the lens of their own disciplines.

02 If mathematics fascinates you, this programme is for you.

Designed for anyone from science, engineering, or technology who wants to discover how mathematics shapes modern research and innovation.

03 More than 40 engaging expository lectures.

Explore beautiful mathematical ideas, their applications, historical evolution, and their role in contemporary science—without the emphasis on technical proofs.

04 Accessible, intuitive, and enjoyable.

Every lecture is paced for a broad scientific audience and assumes only a basic undergraduate background in mathematics.

Target Audience

Faculty members from the following streams are eligible and encouraged to apply:

- Mathematics
- Statistics
- Physics
- Chemistry
- Computer Science
- Other allied Science and Technology disciplines

Course Structure & Key Features

- **Total Duration:** 12 working days
- **Daily Schedule:** 4 daily sessions
- **Session Length:** 90 minutes per session
- **Career Advancement:** Considered for CAS
- **Registration Fee:** None (No Registration Fee)
- **Mode of Conduct:** Online

Registration & Contact Details

Registration Portals:

Confirmed Speakers & Resource Persons

Note: Lecture topics and exact schedules for each speaker will be updated continuously as they are finalized. Expected format for speakers is one or two 90-minute expository sessions.

Speaker	Title / Topic	Sessions
1. K N Raghavan	Constructions using Ruler and Compass	2
2. A K Nandakumaran	<i>To be up-dated</i>	2
3. Krishna Hanumanthu	Connecting the Dots: The History, Geometry, and Applications of Interpolation	2
4. Kaushal Verma	<i>To be up-dated</i>	2
5. Ajith Parameswaran	1. Modern Astronomy: From Galileo to Gravitational Waves 2. Bayesian	2

Programme Schedule

[Detailed day-by-day session schedule to be prepared and inserted here.]
